SCALE IN NAUTICAL MILES

Figure 1 is a graph showing the relationship between Latitude and Nautical Miles. The Y-axis represents Latitude, with markings for EQ (Equator), 20N, 40N, and 60N. The X-axis represents Nautical Miles, with markings from 0 to 600 in increments of 100. Five curves are plotted, each representing a constant distance in nautical miles: 100, 200, 300, 400, and 500. The curves show that for a given distance, the latitude increases as the nautical miles increase, and the rate of increase is higher at lower latitudes.
