SCALE IN NAUTICAL MILES

A graph showing the relationship between Latitude and Nautical Miles. The vertical axis is labeled 'LATITUDE' and has markings for EQ, 20N, 40N, and 60N. The horizontal axis is labeled 'NAUTICAL MILES' and has markings from 0 to 600 in increments of 100. Five curves are plotted, each representing a different latitude. The curves are labeled with their respective latitudes: 60N, 50N, 40N, 30N, and 20N. The curves show that for a given distance in nautical miles, the latitude is higher for a given curve. For example, at 600 nautical miles, the latitude is 60N for the 60N curve, 50N for the 50N curve, 40N for the 40N curve, 30N for the 30N curve, and 20N for the 20N curve.
