SCALE IN NAUTICAL MILES

A graph showing the relationship between Latitude and Nautical Miles. The vertical axis is labeled 'LATITUDE' and has markings for EQ, 20N, 40N, and 60N. The horizontal axis is labeled 'NAUTICAL MILES' and has markings from 0 to 600 in increments of 100. Five curves are plotted, each representing a different latitude. The curves are labeled with their respective latitudes: 60N, 50N, 40N, 30N, and 20N. The curves show that for a given distance in nautical miles, the latitude is higher for curves that are further to the left. For example, at 100 nautical miles, the latitude is approximately 60N for the leftmost curve and approximately 20N for the rightmost curve.
