SCALE IN NAUTICAL MILES

A graph showing the relationship between Latitude and Nautical Miles. The vertical axis is labeled 'LATITUDE' and has markings for EQ, 20N, 40N, and 60N. The horizontal axis is labeled 'NAUTICAL MILES' and has markings from 0 to 600 in increments of 100. Five curves are plotted, each representing a different latitude. The curves are labeled on the right side of the graph: 60N, 50N, 40N, 30N, and 20N. The curves show that for a given latitude, the distance in nautical miles increases as the latitude decreases. For example, the 60N curve starts at 0 nautical miles at 60N and reaches 600 nautical miles at approximately 20N. The 20N curve starts at 0 nautical miles at 20N and reaches 600 nautical miles at approximately 10N.
